Command line commands - main ones

cd   → change directory

ls   → list files

pwd   → print working directory (returns absolute path)

rm   → removes files   ❗ can't undo !

mv   → more and rename

e.g.   mv   'social netball 3.txt'   ../social-netball.txt

'social netball 3.txt' = old file name and location (can use current working directory)

../ = new location

social-netball.txt = new file name
